

ENVIRONMENTAL MANAGEMENT POLICY

As the largest chassis provider in the United States, DCLI is a vital link in the intermodal supply chain, and we recognize the critical importance of providing safe and efficient equipment to our customers in a manner that promotes environmental stewardship. We acknowledge today's environmental challenges and know that preserving natural resources is a shared responsibility. We are dedicated to collaborating with our stakeholders to understand our impacts and provide solutions that positively contribute to those challenges, achieve common environmental goals, and enrich our communities.

Our domestic business supports the movement of intermodal containers across railroads, which are inherently cleaner and more fuel efficient than the alternative of highway transport, and many of our customers have set aggressive emissions reduction targets and climate goals. We are committed to helping our customers achieve their environmental goals in addition to our own and to further decarbonizing intermodal freight.

In doing so, we will be judicious in our use of natural resources and material inputs, minimizing consumption and maximizing resource efficiency. We will continue to invest in technological advances, such as radial tires and LED lights, in order to provide high quality equipment for our customers and to make our chassis more fuel efficient and environmentally friendly.

We will strive to minimize waste and carbon emissions in our supply chain by refurbishing and remanufacturing chassis where feasible and by seeking to source materials and equipment from environmentally responsible vendors. In instances where waste cannot be eliminated, we are committed to responsibly recycling and repurposing materials.

We are also committed to complying with all applicable environmental laws and regulations, and we will stay abreast of new laws and regulations that may impose new mandates on our company or our industry. Our employees will be trained and informed as necessary to ensure such compliance, and we will endeavor to exceed the minimum requirements.

By integrating environmental considerations into our business strategies and decision-making processes, and by actively monitoring, managing, and reporting on our progress, we will actively drive to improve our carbon intensity and protect and preserve our environment for the benefit of all of our stakeholders.

Our commitment to environmental stewardship is unwavering and integral to our continuous pursuit of our core values: customer focus, respect, collaboration, integrity, social responsibility, and safety always.
